

■ Personal Data Collector

Overview

The Personal Data Collector is a beginner-friendly Python project that collects user data and provides simple analysis.

Features

- Collects user input (name, age, height, favourite number)
- Identifies Adult or Minor
- Checks Even or Odd number
- Calculates approximate birth year

Technologies Used

Python (Basic Concepts)

How to Run

1. Install Python
2. Run: **python main.py**

Concepts Used

- Input/Output
- Type casting
- Conditional statements
- Operators
- String methods

Future Improvements

- Add error handling
- Store data in files
- Create GUI
